Doc & Tell

the future of document interaction

pulse by solutions' Doc & Tell revolutionizes how you interact with your documents. This cutting-edge software uses Retrieval-Augmented Generation (RAG) technology to extract knowledge and provide instant answers via an intelligent chatbot.

upload, ask, and understand:

Simply upload your PDFs (and other formats like DOC/DOCX), and Doc & Tell will do the rest! Our advanced OCR technology handles scanned documents too! Ask questions in Arabic or English and get precise, context-based answers drawn directly from your documents.

key features:

- Bilingual Support: Seamlessly detects and works with both Arabic and English documents.
- Intelligent Chatbot: Get instant answers based on your document content or choose to add online information.
- Transparency: See the exact document sections used to generate answers.
- Knowledge Base Management: Easily add, delete, and edit documents.
- Customization: Tailor the chatbot's knowledge base for specific needs.
- Media Recognition & Interpretation: Interprets tables, figures, and charts.
- Summarization: Generate document summaries automatically or using custom templates.
- Feedback & Analytics: Analyzing all submitted feedback to optimize chatbot performance quality and accuracy.

how Doc & Tell works

Doc & Tell parses your documents, extracts text (including from images) and creates intelligent embeddings. These embeddings are stored in a specialized Vector Database, enabling lightning-fast retrieval of relevant information. When you ask a question, the chatbot uses RAG technology to pinpoint the answer within your documents and presents it to you, along with the source text.

technical excellence

Doc & Tell's robust architecture includes user-friendly web interface, powerful backend processing, optimized Vector Database, and pre-trained language models.
